

**IQBBA
FOUNDATION LEVEL
CERTIFIED BUSINESS
ANALYST**

Introduction

The IQBBA training extends our offering further towards early-lifecycle activities. The result of a thorough business analysis (comprehensive, clear and prioritized business requirements) helps to streamline all subsequent development and testing activities. A clear vision of the solution to be built helps to increase quality, lower costs or reduce time to market.

The IQBBA training is particularly useful for business and system analysts, requirement engineers, software testers working at the system and acceptance test levels, project owners and product managers, software architects and customer (“business”) representatives.

The scheme was developed by an international panel of experts. The content of this scheme can therefore be seen as an international standard. The syllabus thereby makes it possible to train and test internationally at the same level.

The IQBBA certification consists of three levels: Certified Foundation Level Business Analyst (CFLBA), Certified Advanced Level Business Analyst (CALBA) and Certified Expert Level Business Analyst (CELBA). At the moment the Foundation Level is available. An Advanced Level is in the process of being defined.

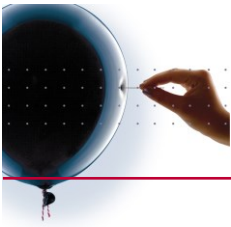

Course objectives

The training is understandable and absorbable by everyone, regardless of their level of experience in business analysis. On completion participants will be able to:

- identify business needs and goals;
- define business cases;
- determine the solution scope and approach;
- implement a change process;
- apply common techniques to collect, analyze and document requirements; and
- plan basic activities for solution validation.

Who should participate?

The Foundation level is suitable for business and system analysts, requirements engineers, product owners and product managers. A basic experience in solution concept, design or development is required.

The Foundation level certification forms a base for a today's key qualification in the business analysis field. The acquired knowledge assures a proficiency in definitions and background about business processes modeling and improving, collecting and analyzing requirements, designing business solutions and working in the area of innovation.

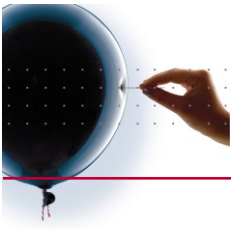

Main focus of the Foundation level certification is put on common rules and standards used in business analysis. An additional topic is the innovation and design as one of major means of building competitive advantage.
