

ISTQB FOUNDATION CERTIFICATE IN SOFTWARE TESTING

Introduction

This three day training course prepares you for the exam leading to the ISEB Foundation Certificate in Software Testing based on the ISTQB Syllabus. At the end of the training, you have the opportunity to take the exam at the training location.

The Foundation Certificate in Software Testing based on the [ISTQB Syllabus](#) is a professional qualification that is recognized by many companies as the standard by which testing staff are measured. The certificate is rapidly becoming more important in an increasingly competitive market.

As Accredited Training Provider, ps_testware offers both scheduled and on-site courses. For your convenience, we organize an examination on the afternoon of the third day of a scheduled course. This is an externally invigilated, one-hour, multiple-choice examination leading to the certificate. Alternatively, you can take a computer-based exam at a certified examination center. Taking the exam is optional.

We have an excellent pass rate, which is consistently over 90%.

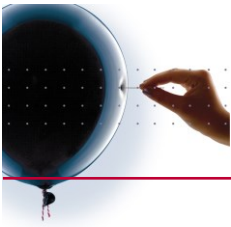

Intended audience

Software developers, testers (both technical and user acceptance testers), test analysts, test engineers, test consultants, and managers including test managers, project managers, quality managers - essentially anyone with an interest in testing.

There are no prerequisites to attending this course.

On completion participants will

- Know how to perform effective testing of software
- Be aware of techniques and standards
- Have an awareness of what testing tools can achieve
- Know where to find more information about testing
- Be able to establish the basic steps of the testing process

Course outline (3 days)

Day 1

- Fundamentals of Testing

Why testing is necessary; what is testing; general testing principles; fundamental test process; psychology of testing.
- Testing throughout the software life-cycle

Software development models; test levels; test types: the targets of testing; maintenance testing.
- Static Techniques

Reviews and the test process; review process; static analysis by tools.

Day 2

- Test design techniques

Identifying test conditions and designing test cases; categories of test design techniques; specification-based or black-box techniques; structure-based or whitebox techniques; experience-based techniques; choosing test techniques.
- Test management (part 1)

Test organization; test planning and estimation

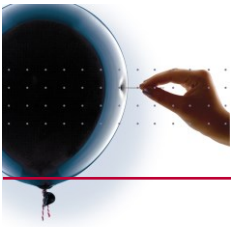

Day 3

- Test management (part 2)

Risk and testing; incident management; test progress monitoring and control; configuration management.
- Tool support for testing

Types of test tool; effective use of tools: potential benefits and risks; introducing a tool into an organization.
- Examination (optional)

The course concludes with a one hour externally invigilated examination which is marked by ISEB. Examination results will be communicated by ISEB not later than 2 weeks after the examination date. Certificates will be issued at the same time or at the latest within 6 weeks of the result notification.

Course details

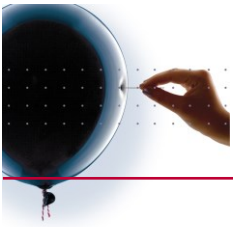

- Course hours: 9:00 to 17:30 and lunch breaks from 12:30 to 13:30;
